marine engines and their air pollution

It is time to get all marine engines, including personal watercraft, to meet all strict standards for clean air. i see no reason why any two stroke engines should be allowed to pollute. drive up the cost of these pwc's until they do not pollute the air. we all need clean air to breathe. we do not need to be poisoned by owners of pwc's.

all marine engines need to meet the same strictly regulated air standards. the highest standards for clean air must be met.

anything less is poisoning america and americans and is in fact part of a terroristic attack. americans need clean air to breathe. our engineers can and must be forced to do better. they dirty politicians in office have been giving these industries a bye. it is time for the standards to be enforced and the politicians who allow this pollution to be turned out on their ears.
